

AMAZON SALES ANALYSIS REPORT

Amazon Sales Performance & Fulfilment Analysis

Project Title	Amazon Sales Performance & Fulfilment Analysis
Prepared By	Sambhav Dudhwewala
Report Type	Business Analysis Report (Post-Dashboard)
Data Period Covered	March 2022 - July 2022
Tool Used	Tableau
Date	13 July 2026

1. Executive Summary

This report presents a business analysis of Amazon sales performance between March and July 2022, based on a six-panel Tableau dashboard covering B2B segmentation, geospatial demand, monthly trends, category-level revenue, fulfilment-channel comparison, and order cancellation root causes. The analysis was undertaken to help business stakeholders understand which categories and fulfilment channels drive the most value, where regional demand is concentrated, and what is contributing to order cancellations.

The dashboard shows that T-shirts are the top revenue-generating category but also the category most affected by cancellations, that Amazon-fulfilled orders substantially outperform Merchant-fulfilled orders, and that demand is heavily concentrated in Maharashtra and Karnataka. These findings point to three priority actions: investigate T-shirt cancellation drivers, strengthen Merchant-channel reliability, and align regional inventory with demand concentration.

2. Business Problem

Business leadership needs visibility into which sales channels and product categories are performing well, where regional demand is concentrated for inventory planning, and why a meaningful share of orders are being cancelled. Without this visibility, inventory decisions, channel investment, and category-level strategy are being made without a clear evidence base, risking lost revenue from stockouts, overstocking, or unresolved cancellation drivers.

3. Objectives

- Compare the performance of Amazon-fulfilled orders against Merchant-fulfilled orders across product categories.
- Identify the product categories generating the highest and lowest revenue.
- Determine the key drivers and patterns behind order cancellations by category and status.
- Map regional demand to support inventory allocation decisions.
- Track monthly sales trends to identify growth, decline, or seasonality by channel.

4. Key Business Questions

- Which product categories generate the most revenue, and how does this differ between B2B and B2C segments?
- How does Amazon-fulfilled order performance compare to Merchant-fulfilled performance?

- What proportion of orders are cancelled, and which categories are most affected?
- Which regions show the highest demand for specific product categories?
- How has monthly sales volume trended across the two fulfilment channels?

5. Assumptions & Scope

Assumptions

- Cancellation patterns are inferred from order status data; specific cancellation reason codes were not available in the source dataset.
- Regional figures represent order volume/demand as captured in the dataset and are assumed to reflect actual shipping destinations.
- "B2B" and "B2C" segmentation (TRUE/FALSE) in the dataset is assumed to be accurately tagged at source.

Scope

- In scope: order data from March 2022 to July 2022 across product category, fulfilment channel, region, and order status.
- Out of scope: customer-level behavioural analysis, pricing/discount analysis, returns and refunds after delivery, and profitability/margin analysis (revenue only, not cost data).

Limitations

- Findings are based on revenue and order-status data only; no cost or margin data was available, so recommendations are directional rather than profitability-tested.
- Cancellation analysis identifies category-level patterns, not confirmed root causes, since reason codes were not present in the dataset.

6. Data Source

The analysis uses an Amazon sale report dataset covering order-level transactions from March to July 2022, including fields for product category, fulfilment channel (Amazon vs Merchant), B2B flag, order status, region/state, and order amount. Data was cleaned and modelled in Tableau, with six worksheets built to answer the business questions above.

7. Key Findings

7.1 B2B Growth and Segmentation

Across B2B orders, T-shirts (₹836.3K Amazon / ₹826.4K Merchant) and Shirts (₹457.9K / ₹452.1K) dominate revenue, while categories like Wallets, Watches, and Socks contribute marginally.

Figure 1: B2B Growth and Segmentation — Amount by Category, Fulfilment, and B2B flag

Business Implication: B2B growth strategy should concentrate inventory, pricing, and account-management effort on the top 2-3 categories rather than spreading thin.

7.2 Geospatial Demand and Regional Inventory Allocation

Maharashtra shows the highest regional concentration (3.6M Shirt demand, 1.08M T-shirt, 87K Blazer), followed by Karnataka (1.6M Trousers, 1.6M T-shirt) and Uttar Pradesh/Delhi-NCR clusters.

Figure 2: Geospatial Demand and Regional Inventory Allocation across India

Business Implication: Regional inventory allocation should be weighted toward Maharashtra and Karnataka to reduce fulfilment lag and stockouts in high-demand zones.

7.3 Monthly Sales Trend by Channel

Monthly trend (Mar-Jul 2022) shows Amazon channel volume declining from ₹10.03M (March) to ₹7.29M (July), while the Merchant channel stayed relatively flat and low throughout.

Figure 3: Monthly Outfit Category Sales — Amazon vs Merchant

Business Implication: The Amazon channel's downward trend needs monitoring — could indicate seasonality, but also warrants checking for supply, pricing, or listing issues.

7.4 Category-Wise Revenue

T-shirts are the single highest revenue category (₹33,326 in the category/fulfilment view) but also carry the highest cancellation volume of any category, as shown in Section 7.6.

Figure 4: Revenue by Product Category and Fulfilment

Business Implication: High revenue is being partially offset by high cancellation loss — this category needs root-cause investigation before further scaling.

7.5 Amazon vs Merchant Fulfilment Comparison

Amazon-fulfilled orders generated ₹50.3M vs ₹19.3M for Merchant-fulfilled — roughly 2.6x higher.

Figure 5: Amazon-fulfilled vs Merchant-fulfilled Order Performance

Business Implication: Amazon's own fulfilment network is the stronger-performing channel; merchant fulfilment may be under-supported or less reliable.

7.6 Root Cause Analysis of Order Cancellations

Cancellations cluster heavily in the T-shirt and Shirt categories, with visibly fewer cancellations in Socks, Perfume, and Watch.

Figure 6: Root Cause Analysis of Order Cancellations by Category and Status

Business Implication: Cancellation drivers are category-specific, not uniform — suggesting the cause is tied to product attributes (e.g., sizing, listing accuracy) rather than a platform-wide issue.

8. Recommendations

- Investigate T-shirt and Shirt category cancellations specifically — review sizing accuracy, product listing quality, and delivery timelines for these two categories before scaling further inventory or marketing spend.
- Prioritise the Amazon-fulfilled channel for growth investment given its ~2.6x revenue performance over Merchant-fulfilled, while running a root-cause review of what is limiting Merchant-channel performance.
- Allocate additional regional inventory to Maharashtra and Karnataka, the two highest-demand states, to reduce stockout risk and improve delivery speed in these zones.
- Monitor the declining monthly trend on the Amazon channel (₹10.03M in March down to ₹7.29M in July) to determine whether this is seasonal or indicates an emerging issue requiring intervention.
- Concentrate B2B account management and pricing strategy on the top two to three categories (T-shirts, Shirts, Trousers) rather than spreading effort evenly across all categories, given their outsized share of B2B revenue.

9. Next Steps

- Obtain detailed cancellation reason codes (if available) to move from correlation to a confirmed root cause for T-shirt/Shirt cancellations.
- Conduct a cohort analysis of repeat B2B customers to understand retention and repeat-purchase behaviour by category.
- Extend the monthly trend analysis beyond July 2022 (if more data becomes available) to confirm whether the Amazon-channel decline is seasonal or sustained.
- Layer in cost/margin data to convert the current revenue-based findings into a profitability-based prioritisation.

10. Conclusion

This analysis demonstrates that while the business is generating strong overall revenue — led by the Amazon fulfilment channel and the T-shirt category — there are clear, actionable opportunities to reduce cancellation-driven revenue loss, strengthen underperforming channels, and align inventory more closely with regional demand. The recommendations above are intended to give stakeholders a prioritised, evidence-based starting point for the next round of operational and inventory decisions.
